Integrated Media Systems (IMS) maximizes an organization’s Communication Quotient. Through multiple vertical markets; Corporate, Government/Municipal, Healthcare, and Education, IMS deploys strategies that help organizations communicate more effectively. Whatever the technology; videoconferencing, audio conferencing, telepresence, digital signage, video walls, presentation, collaboration boards, touch screens, tablets, or smart phones, IMS helps organizations make communication decisions that ensure critical path communications are easy to use, interoperable, robust, reliable, and align with the organizations long term business plans.

Leveraging 25 years of experience and thousands of successful projects, IMS has helped some of the largest and most influential organizations in the world; Apple, Boeing, Symantec, Capital Group, the Department of Energy, Kaiser, and the University of California, develop and implement global enterprise communication plans. IMS offers strategic consulting services, world-class design-build services, and unparalleled support and service. As a consultant, IMS helps organizations develop long-term, comprehensive communications plans. By evaluating existing systems and immersing ourselves in how an organization operates, IMS leads organizations to utilize standardized solutions that enhance organizational collaboration in the boardroom, in conference rooms, in training rooms, on desktops, on tablets, and on smart phones. IMS’ five-step design-build process (Design, Engineering, Staging and Fabrication, Installation, and Support) delivers systems that just work.
IMS’ 5 Phase System Development process insures our clients receive systems that just work! When a CEO, VIP or even the President is using the system or is in the room there is no other choice.
Every integrated system IMS builds is fabricated, assembled, programmed and tested in our state-of-the-art Interoperability Lab. This not only insures systems work as expected when they are installed in the field, but also cuts down on field installation time.
Typical System Deployments

- Corporate Boardrooms
- Conference Rooms
- Classrooms
- Briefing Centers
- Conference Centers
- Government Applications
- Command and Control Centers
- Presentation Auditoriums
We Are Experts In...

Videoconferencing  
Telepresence  
Universal Communications  
Audio Conferencing  
Audio Distribution  
Video Distribution  
Projection Displays  
Large LCD/LED/Plasma Displays  
Video Walls  
Interactive Displays  
Digital Signage  
Touch Screens  
Systems Standardization  
Analog to Digital Transition  

Audio Recording  
Video Recording  
Sound Reinforcement  
Environmental Acoustics  
Lighting  
Broadcasting  
Streaming  
Video On-Demand  
Archiving  
Control Systems  
Furniture  
Millwork  
Window Treatments
IMS is a Value Added Reseller or has procurement relationship with over 400 product manufactures. This insures IMS specifies the best and most appropriate product for each application, and is not bound by limited equipment access. Below is sampling of some of the leading manufactures we partner with.
IMS is an affiliate of Professional Systems Network International (PSNI), an international alliance of premiere audio visual and broadcast systems integrators. IMS actively teams with other PSNI affiliates on large scale deployments to perform projects in areas where IMS does not have a local presence. Utilizing a single point of contact and responsibility and effective centralized project management, large scale projects may be performed seamlessly as one consolidated organization.
Clients
Symantec Corporation is a long-term client of Integrated Media Systems. IMS has performed and delivered more than 75 projects nationwide for Symantec in the past several years. As with many IMS clients, these projects initially started out as traditional AV integration and design, supporting meeting spaces and videoconferencing requirements. IMS and Symantec are now strategically aligned. IMS provides systems and services that are integral to Symantec’s ability to achieve their corporate goals.
**Boeing Satellite Systems** has been a client of IMS since 1997. Together, IMS and Boeing Satellite Systems have completed over 230 projects, spanning years and several million dollars of work. Boeing is a scientific organization providing classified and non-classified systems and services to the federal government and national security interests. IMS is not at liberty to discuss the details of the individual projects, however, IMS is able to state that the facilities supported by IMS include a wide-range of applications from simple AV presentation systems supporting planning, staff and program specific meetings; to large venue auditoriums, network operating centers, system labs and presentations spaces supporting classified applications. IMS has provided presentation and display systems, audio reinforcement systems, videoconferencing, integration into digital media systems, system control and programming as part of our deliverables to Boeing.

**Capital Group Companies** is a long-term strategic partner of IMS. As the exclusive integrated systems provider for Capital Group Companies for the last 4 years, IMS has completed over 25 projects across the country, delivering several million dollars in systems, and has provided Global system design and support. IMS is not at liberty to discuss individual project details, however, IMS delivers value to Capital Group by developing corporate standardization strategies that reduce cost and increase capabilities. Most recently, IMS played a central role in the design and implementation of two new Emergency Operations/ Data Centers.
Kaiser Permanente has relied on IMS to support the design, construction and deployment of auditoriums, videoconferencing rooms, clinical applications and multi-purpose meeting spaces in over 40 projects. IMS’ charge from Kaiser has been to support both clinical and business applications within Kaiser’s medical operations. Core to IMS’ technical approach is that virtually all users are itinerate users, meaning that users conducting meetings are often unfamiliar with the technology deployed in the rooms. Additionally, Kaiser’s regional technical support for these meetings may or may not be on site during the meeting. As a result, IMS developed a best practice model for Kaiser that created a common set of equipment and common methods of use. IMS deployed a long-term strategy that enabled users to configure the room based upon meeting style and provided remote technical support from systems administrators connected to the room through a simple web browser.
University of California Irvine and IMS have a long history spanning over a decade. For UCI’s Medical School, IMS built one of the first of its kind, Converged Surgical and Training Systems that enables specialists to seamlessly access virtually any desired information from the surgical field as well as support live and digitally archived training and instruction. Most recently, IMS has outfitted UCI’s School of Art with a state-of-the-art classroom.
Sandia National Laboratories is an example of IMS’ ability to support enterprise-class communications deployment. Sandia’s application is an IP and ISDN centric collaboration system that supports both classified and non-classified applications. Typical of most of IMS’ enterprise-class Clients, IMS’ responsibilities included creating collaboration rooms that are easy to use, improve productivity, and enable the communication of complex and technical topics. Over 425 projects were completed over 7 years.
Partial Client List

**Corporate**
AARP
Apple
AT&T
Autotrader.com
Arco
Bausch & Lomb
Barclays
California Credit Union
Capitol Group
